PROJECT REPORT

Name – Vaidehi Upadhyay
Reg Number – 25BCY10027
Branch – Btech. CSE (Cybersecurity and Digital Forensics)
Year – 2025-2029
Course Code – CSE0001
Date – 31March 2026

INTRODUCTION

This project helps improve digital literacy skills among students by telling about safe internet practices, professional communication, online presence, and awareness of cybercrimes through various tasks like creating infographics, email writing, social media guidelines, and online quizzes. By working on platforms like GitHub and Google Forms, students gain hands-on experience in data handling , coding and many more .

The scenario is of a student as a Digital Ambassador who educates their peers about digital safety. It includes real-life situations such as writing professional emails, identifying cyber frauds, and maintaining a positive online presence. The project aims to enhance students ability to use digital tools responsibly and effectively.

TASK 1

I use Canva to create an infographic as it a free and easy-to-use design tool. My infographic covers topics such as the meaning of digital literacy, useful digital tools for students, safe internet practices . I have organized the content into clear sections with headings, icons, and short bullet points so that it is easy to understand at a glance.

The design highlights tools like Google Docs and Canva, along with essential safety practices such as using strong passwords and avoiding suspicious links . The design focuses on helping students become more aware of how to use digital technologies effectively and responsibly.

The challenged I faced while creating the infographic was selecting the right layout and balancing text with visuals. Initially, I included too less information, which made the design look empty . However, I learned how can I add more content and use visuals. Overall, this task was interesting and fun to so. It helped improve my creativity and digital skills.

TASK 2

I have created profiles on GitHub, LinkedIn, and Kaggle. GitHub is used to share and manage code and work on projects with others. LinkedIn is a platform to build professional connections and show your skills, education, and achievements. Kaggle is used for learning data science, where users can practice with data and take part in competitions.

I completed my GitHub profile and updated my project about Expense manager system and Digital Literacy by creating a README file that includes basic details and goals of the respected project . On LinkedIn, I updated my information like my current degree and expected graduation year, my skills and some certificates . I also explored Kaggle to understand how data science projects are shared.

Over the next four years, I plan to use GitHub to upload many more projects and improve my coding skills, LinkedIn to build a professional network and explore career opportunities, and Kaggle to learn data analysis and participate in competitions. This task helped me grow both academically and professionally.

TASK 3

In this task , I used HackerRank and Google Forms.

On HackerRank, first I created an account and solved a beginner-level problem called “Solve Me First.” From this I was able to understand the basic structure of coding problems and improve my logical thinking skills. From this I got confidence to practice more programming challenges.

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions - including 4 multiple-choice and 1 short answer types. This form can be used to test the digital knowledge of my classmates.

These tools will be very helpful in my academic journey. HackerRank will improve my coding and problem-solving skills, while Google Forms will help me in conducting surveys, collecting data, and working on group projects efficiently. Overall, this task enhanced my technical and practical knowledge.

TASK 4

Poor digital communication can often lead to misunderstandings and serious problems. For example, a student once sent an email to a professor without a proper subject line and used informal language. The message was unclear, and the professor ignored it, assuming it was unimportant. As a result, the student missed an important deadline.

This situation could have been avoided by following proper email etiquette. The student should have used a clear subject line, polite language, and structured the message properly. Being respectful and professional in digital communication helps ensure that the message is understood and taken seriously.

In this task , I have written 2 E-mails . One I have written for extension of the assignment deadline and another one for summer internship application.

Also I have created a DO's and DON'T's list for social media use . It will help people to understand how to handle social media effectively and safely .

TASK 5

While researching this topic, I was surprised to see how easily people become victims of cybercrime. Even small mistakes like clicking on unknown links or trusting fake calls can lead to serious problems such as loss of money. I also learned that students are often targeted because they use the internet frequently but may not always be careful.

Because of this, I will change one habit. I will be more careful while using the internet, especially with unknown messages and payment requests. I will always check before clicking on links and never share personal information, so that I can stay safe online.

CONCLUSION

This project helped me understand the importance of digital literacy in today's world. I learned how to use digital tools effectively, maintain a professional online presence, and follow safe internet practices. Through different tasks like creating an infographic, building online profiles, solving coding problems, and studying cybercrime, I gained both practical and theoretical knowledge.

I also understood how important it is to communicate professionally through emails and behave responsibly on social media. Overall, this project improved my awareness, technical skills, and confidence in using digital platforms safely and effectively in academic and daily life.
